

OPTITEMP temperature measuring technology by KROHNE

TT 30 C

KROHNE will be presenting a complete product family known as OPTITEMP for measuring temperature in industrial applications at AICHEM for the first time. The range on display includes both analog and digital in-head and rail-mount transmitters with 2- and 3-wire technology. The measuring devices can also be used in hazardous areas and feature HART / PROFIBUS interfaces. A complete range of resistance thermometers and thermocouples with various connections means that they are suitable for high pressures and temperatures of up to 1700°C. Hygienic connections for applications in the food and beverage and pharmaceuticals industries are also available. OPTITEMP can be used for most applications in pipelines, stoves, boilers and tanks.
