

In the black for a green balance sheet

KROHNE presents innovative solutions for energy measurement at INTERKAMA

Duisburg, April 23, 2009:

The energy market remains a growth market: Due to the increasing need for power, there are currently more than 230 new power plants either under construction or planned worldwide. According to estimates, more than 800 billion Euros will be spent annually in the power plant business until 2030. This includes not only new constructions but also renovations of existing power plants.

Measuring technology plays an important role here: the deciding factor when it comes to the efficiency of a power plant is the accuracy of the measurements. The more accurate the measurements, the more efficient the power plant. That translates into increased profit for the operator.

Many countries continue to rely on nuclear technology to safeguard their future power requirements. For new constructions and the overhauling of existing plants, KROHNE offers high temperature ultrasonic measuring devices, variable area flowmeter and level meters which can be used in steam and water circuits. As the only manufacturer of measurement technology in Germany, KROHNE has all of the important approvals for the instrumentation of nuclear power plants: KTA, RCC and the ASME N-stamp.

At INTERKAMA 2009, KROHNE presents new measurements solutions for the power generation market. The portfolio includes flow, level and temperature measuring devices to cover the measuring tasks in various types of power plants: from custody transfer to simple mechanical flow display.

ALTOSONIC V12: Ultrasonic meter for natural gas

About KROHNE: Established in 1921, the family business of KROHNE employs 2,510 people around the world and has representatives on all continents. The company is based in Duisburg, Germany where it develops, manufactures and sells products in the field of measuring technology and stands for innovation and superior product quality. KROHNE is a market leader in industrial process measuring technology.
